- Full-stack development
- Accessibility & Scalability
- Performance & Reliability
- API design & Integration
- SEO & Web Performance
- Product-focused communication
- Problem solving & ownership

Language

- English — Professional Proficiency
- Bengali — Native

Professional Summary

Full-stack web developer building scalable, production-ready apps with JavaScript/TypeScript, React/Next.js and Node.js using Firebase or MongoDB. I focus on practical reliability and speed, shipping offline caching, resumable uploads and SEO-friendly server-side rendering to cut failed uploads and support tickets and keep pages fast on low-end networks. I solve real user and product problems, not just write code.

Projects & Experience

Full Stack Developer   Nov 2024 – July 2025

Neon Cart | Self-initiated Project (Remote)

Developed Neon Cart, a full-stack e-commerce platform enabling smooth buyer and seller journeys from prototype to production. Reduced seller friction with multi-step listings, live previews, compression, and resumable uploads for reliable posting. Delivered faster, stable pages with lazy loading, serverless checks, and clean component-driven code while leading reviews and targeted fixes.

Web Application Developer   Apr 2024 – Nov 2024

Quiver Messaging | Freelance Project (Remote)

Built Quiver, a real-time messaging app with SEO-friendly pages. Ensured smooth sync of messages, reactions, and read receipts across devices. Added voice messaging and an interactive canvas drawer for richer chats. Delivered reliable uploads on weak networks with compression and resumable queues. Maintained lean, cost-efficient infra with serverless checks, monitoring, and stress testing.

Full Stack Developer   July 2023– Feb 2024

Brainiac | Self-initiated Project

Developed Brainiac, a blogging platform with secure auth, session handling, and protected routing. Enhanced user engagement with rich text editor, reading history, bookmarks, and trending feeds. Boosted speed and reach through SEO, image compression, lazy loading, and offline caching. Streamlined publishing with autosave and optimized assets while maintaining stability through proactive issue resolution.
